13. The method of claim **12**, wherein drying is at an ambient temperature.

14. The method of claim **12**, further comprising casting the mixture onto a backing surface prior to drying the mixture.

15. The method of claim **1**, wherein the composition is peeled from the backing prior to administration.

16. The method of claim **14**, wherein the backing surface is selected from the group consisting of aluminum, Teflon, silicate, polyetheretherketone, low density polyethylene, and ethyl cellulose.

17. The method of claim **11**, wherein the amorphous, substantially solid film, has a thickness of about 0.05 millimeters to about 5 millimeters.

18. The method of claim **1**, wherein the viral vector encodes a heterologous polypeptide.

19. The method of claim **1**, wherein the viral vector is an adenovirus viral vector.

20. The method of claim **1**, wherein the viral vector is present in an amount of from about 1×10^{6} to about 1×10^{13} virus particles.

21. The method of claim **14**, wherein the backing surface comprises aluminum, Teflon, silicate, polyetheretherketone, low density polyethylene, ethyl cellulose, or a combination thereof.
